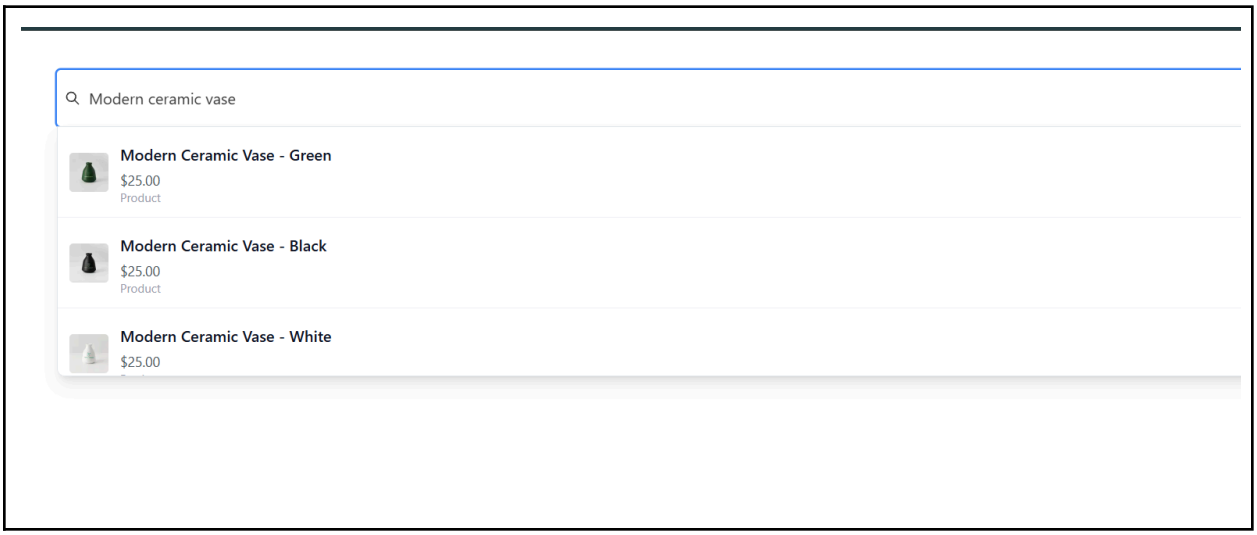
UI Testing :

website:
https://demo.evershop.io/

Search Product :

- Click on the search bar “Modern Ceramic Vase”
- Expected Result: Search results page should display thermos products.



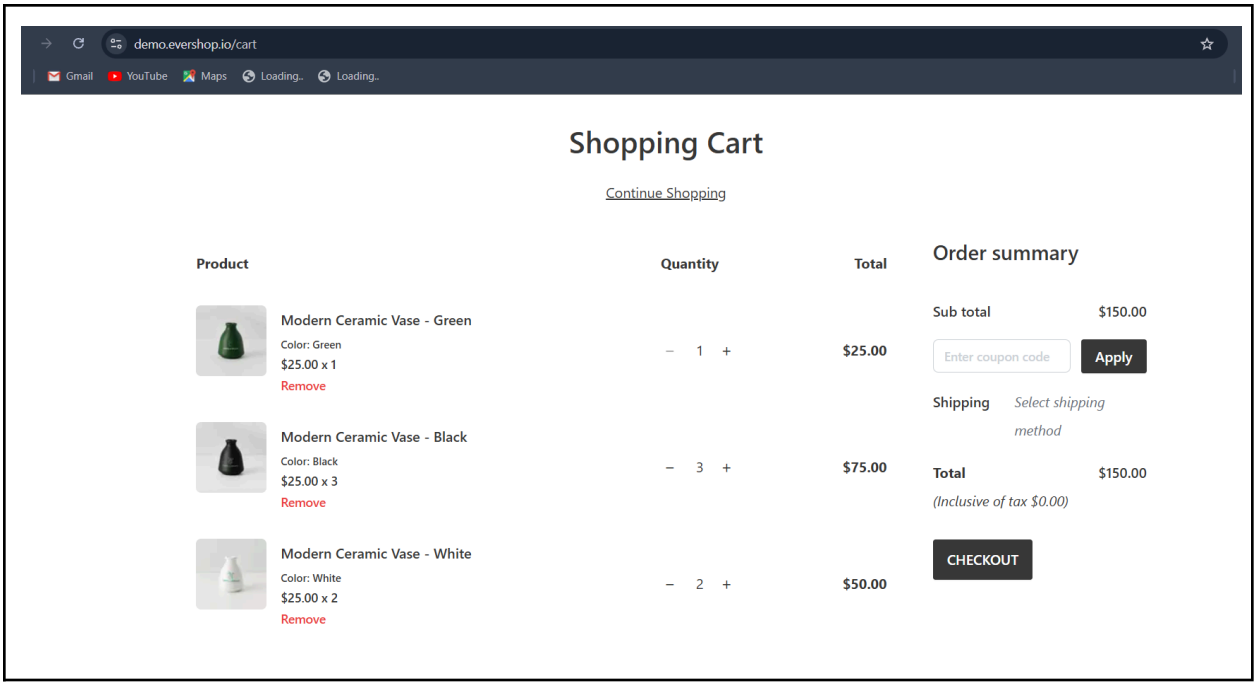
Actual Result: Product list is displayed.

Add Products to Cart and Verify:

- Select Different Colour Vase
- Click Add to Cart
- Verify cart details.

Expected Result: Selected products should be added to the cart and cart should display the correct product name, color, quantity, and price.

Actual Result: Product added successfully and Cart details (product name, color, quantity, and price) are correct.



Actual Result: Product added successfully.

UI Result :

- Products added successfully
- Cart details are correct
- No UI issue found

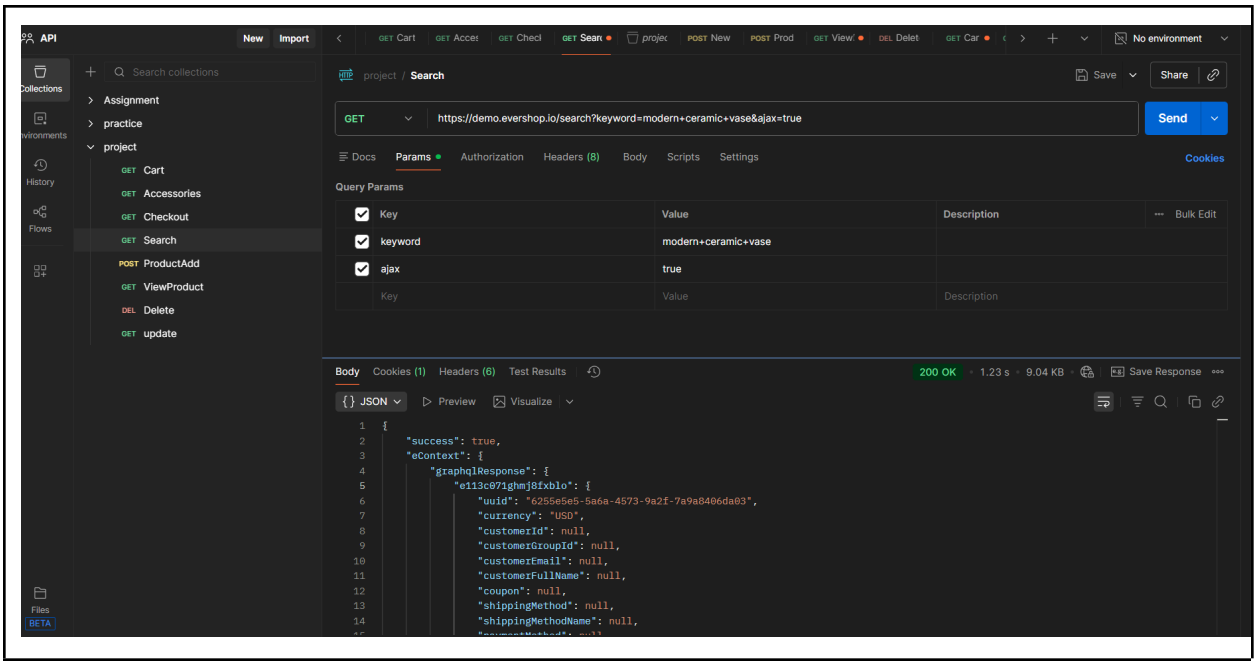
API Testing :

API testing was performed using Postman and Browser DevTools (Inspect → Network).

Search :

Method: GET

Expected Result: Search API should return product results

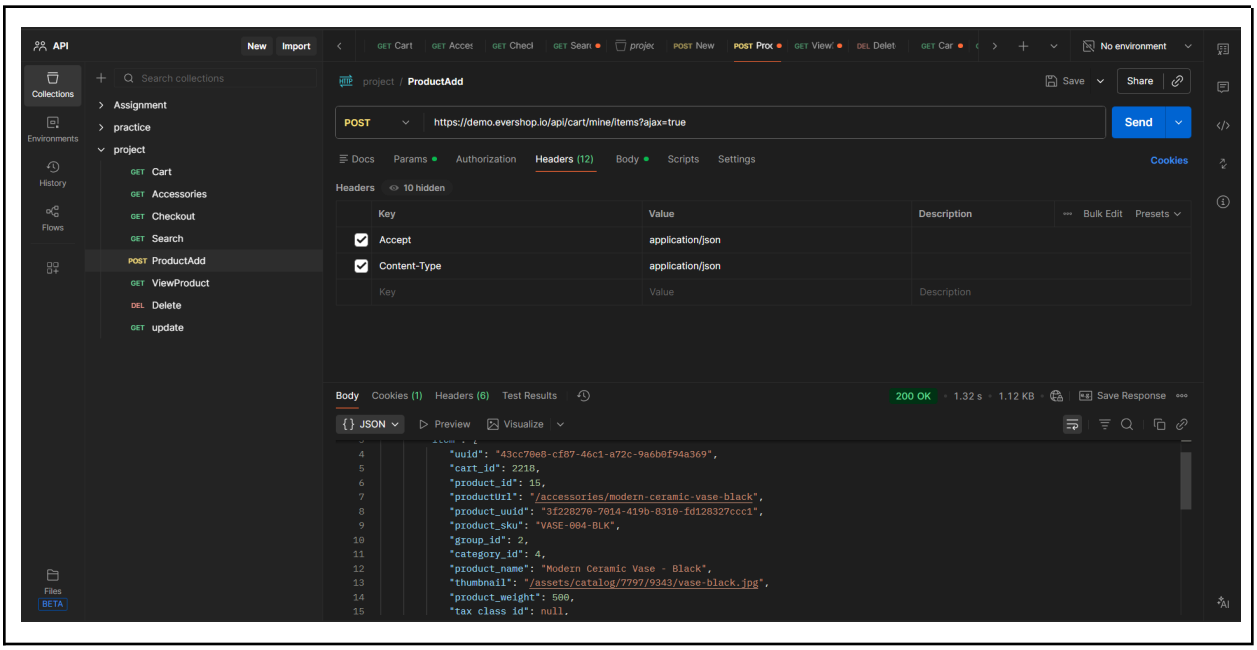


Actual Result: Search results returned successfully.

Add to Cart :

Method: POST

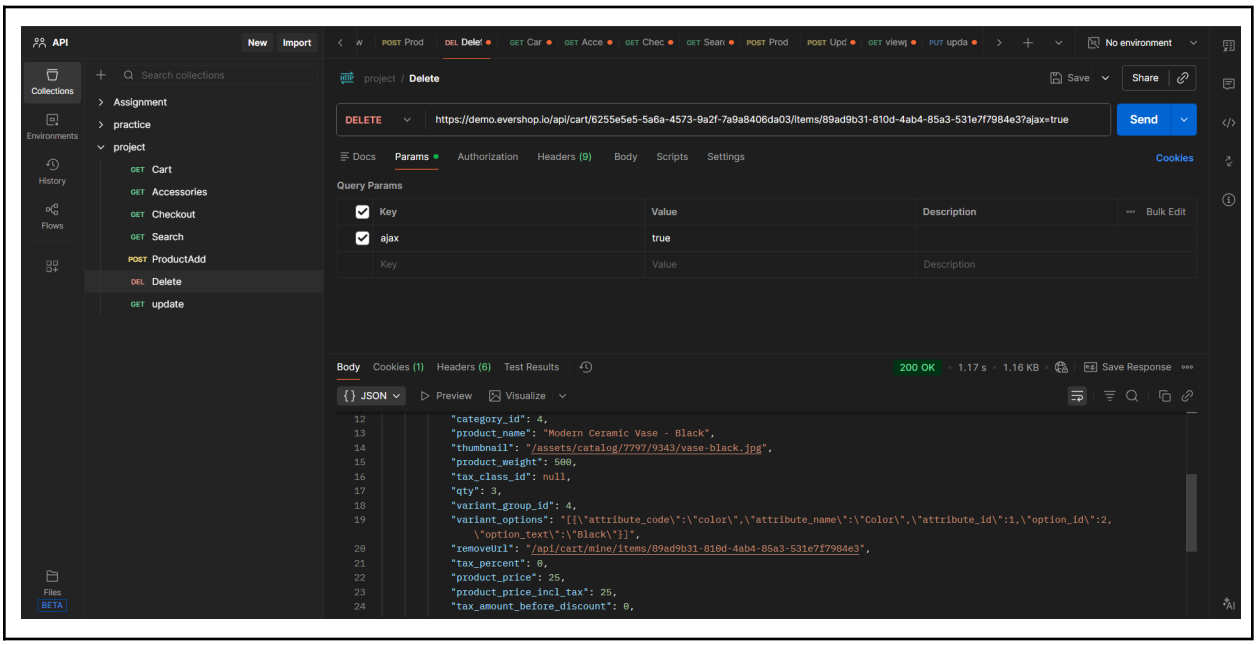
Expected Result: Product should be added to cart and a cartId generated.



Actual Result: Product added successfully and cartId received.

Delete Product :

Method: DELETE
Expected Result: The item should be removed from the cart.



Actual Result: Product deleted successfully .
Test Analysis :

The happy path journey for searching products, adding items to the cart, and verifying cart functionality was executed through both UI and API. Most core functionalities, such as search, add to cart, and delete from cart, worked as expected. Overall, the testing helped identify which features are working correctly and highlighted areas that may require further validation.
